CONTENTS

Research papers
Manganese oxide reactivity in North Sea sediments
C. van der Zee and W. van Raaphorst .................................................. 73
Pelagic and seabed fluxes of particulate matter and carbon, and C:N ratios resolved by sediment traps during a spring bloom, southwest Kattegat
L.C. Lund-Hansen, M. Pejrup and S. Flerud .............................................. 87
Comparison of the numerical grazing response of two marine heterotrophic nanophagellates fed with different bacteria
B.R. Mohapatra and K. Fukami .............................................................. 99
Macrofaunal assemblages of benthic habitat of different complexity and the proposition of a model of biogenic reef habitat regeneration in Foveaux Strait, New Zealand
A comparison of fish communities of subtidal seagrass beds and sandy seaboed in 13 marine embayments of a Caribbean island, based on species, families, size distribution and functional groups
I. Nagelkerken and G. van der Velde .................................................... 127
