

COASTAL AND ESTUARINE MANAGEMENT

ROUTLEDGE

Peter W. French

ROUTLEDGE ENVIRONMENTAL MANAGEMENT SERIES

Contents

<i>List of plates</i>	vii
<i>List of figures</i>	viii
<i>List of tables</i>	x
<i>List of boxes</i>	xii
<i>Preface</i>	xiii
<i>Acknowledgements</i>	xv
1 Introduction to estuarine and coastal systems	1
Introduction	2
Types of estuarine and coastal environments	8
Human impacts on coasts and estuaries	14
Summary of Chapter 1	24
2 The physical regime of coasts and estuaries	25
Introduction	26
Wave-dominated coasts	26
Tide-dominated coasts	41
Coral reefs	49
Wind-dominated (aeolian) coasts	50
Deltaic coastlines	51
Summary of Chapter 2	52
3 Land claim and coastal defence	55
Introduction	56
History of land claim	57

CONTENTS

Environmental implications of land claim	58
Coastal protection	71
Coastal defence management and planning	104
Managed realignment: a universal solution in soft engineering?	110
Summary of Chapter 3	115
4 The industrial use of coasts and estuaries	117
Introduction	118
Historical trends in waste disposal	121
Effects of pollution on estuaries and coasts	130
Effects of power generation	137
Summary of Chapter 4	145
5 Coastal development for tourism	147
Introduction	148
Problems of tourist development at the coast	150
Demands of the tourist industry	160
Examples of tourist impact on coastlines	165
Summary of Chapter 5	168
6 Causes of indirect impacts on the coast	171
Introduction	172
Inland causes	172
Offshore causes	177
Summary of Chapter 6	184
7 Management frameworks for coastal and estuarine systems	187
Introduction	188
The concept of coastal zone management	191
The future of the coastline	208
The way forward	217
Summary of Chapter 7	219
The final word	221
References	223
Location index	245
Subject index	248

Plates

2.1	Beach cusps formed as a result of a combination of shore-normal and shore-parallel currents to form rips	35
2.2	The combination of high tidal range and rapid narrowing and shallowing of an estuarine channel resulting in the formation of a tidal bore wave	43
2.3	A wide intertidal sandflat fronting a dune complex	50
3.1	Large borrow pit fronting a sea bank	63
3.2	Typical earth embankment protecting land claim from tidal inundation	72
3.3	The use of brushwood groynes to increase sedimentation in the intertidal zone	99
5.1	A simple trample prevention management measure in sand dunes	156
5.2	Wooden bridge allowing beach access across large sea defence blocks	161

Figures

1.1	Development of the coast as seen from a human perspective	3
1.2	Development of the coast as seen from an environmental perspective	3
1.3	Generalised trends of coastal erosion and accretion in the USA and the UK	6
1.4	Simplified process diagram to show the interaction of main components of coastal processes	10
1.5	Delineation of coastal cell boundaries for the UK	11
1.6	The coastal system	15
2.1	Environmental controls of sediment deposition and erosion in a wave-dominated beach system	28
2.2	Effects of foreshore shallowing on the wave form	29
2.3	Effects of sea floor morphology on wave front refraction, and the subsequent concentration of waves at headlands	31
2.4	Wave impact on beaches dominated by shore-parallel currents, and the impacts on the resulting morphology of groynes	33
2.5	Interaction of shore-normal and shore-parallel currents to produce rip currents	34
2.6	Typical concordant and discordant coastlines	38
2.7	Effect of different relationships of resistant and less resistant rocks in cliff morphology	39
2.8	Controlling factors in cliff stability	40
2.9	Effect of frequency of tidal inundation on the vertical accretion rates of recent salt marshes	42
2.10	Relationship of current velocity to intertidal depositional environments	45
2.11	Variation of salt marsh types in a range of tidally dominant environments	46

3.1	Impact of land claim on the intertidal area of the Tees, north-east England	59
3.2	Impact of land claim and sea wall construction on the intertidal area of an estuary	61
3.3	Effect of sea wall construction on intertidal habitats	65
3.4	Impact of dredging on an estuarine deep water channel	70
3.5	Areas of unprotected eroding cliffs in England	73
3.6	Impact of cliff protection along a coastline	75
4.1	Diagrammatic representation of typical heavy metal concentration v. depth trends from polluted salt marsh sequences	124
4.2	The Severn estuary and Bristol Channel system as an example of the causes of estuarine and coastal pollution, and the various transport pathways	125
4.3	Point sources of pollution input in the Severn estuary and Bristol Channel	127
4.4	Age distribution for the occurrence of major pollutants in sedimentary deposits	131
4.5	Accumulation of DDT up an estuarine food chain	138
4.6	Simplified section of the impounded water behind the Tawe barrage, south Wales	142
5.1	Number of proposed marina and mooring developments, by county, in England	151
6.1	Hypothetical storm hydrographs for rural and urban catchments	173
7.1	Framework for the integration of the various management plans into an overall coastal strategy	208

Tables

1.1	The time scale of coastal changes in relation to both absolute and human time scales	9
1.2	The contrasting forms of agent dominance at the coast and their resulting landforms	14
1.3	The potential human impacts on coastal environments, and their significance with respect to change	16
3.1	The extent of land claim in some UK estuaries	60
3.2	The loss of coastal habitats as a result of land claim in a range of coastal environments	67
3.3	Practical considerations in the decision as to whether or not to construct sea defences	80
3.4	Some examples of beach renourishment studies from around the world	87
3.5	The relationship between salt marsh width and the required height and cost of the sea wall	91
4.1	The relevance of coastal and estuarine sites for industrial developments	119
4.2	The relative importance of different transport media in the supply of metal pollution in the Severn estuary	126
4.3	A comparison between natural and anthropogenic rates of heavy metal input	128
4.4	The costs of developing and utilising tidal power in some UK estuaries	140
6.1	Oil tanker accidents since 1967, and their impacts on the coast	179
7.1	The increased environmental information available to the coastal planner as a result of increasing the area of coastline used for data-gathering	189
7.2	The relationships of statutory and non-statutory management initiatives at national, regional, and local levels	191

7.3	Select bibliography of coastal zone management initiatives in different countries	196
7.4	Select bibliography of sea level rise studies from different countries	211

Boxes

3.1	Loss and predicted loss of intertidal habitats along the coast of England	68
3.2	Coastal protection and its impacts along the Fylde coast, north-west England	77
3.3	The relationship of windiness to marsh erosion/accretion cycles in the Severn estuary	93
3.4	Removal of marsh clay in the Medway estuary for brick-making	95
4.1	The relationship of nuclear installations and coastal stability in the UK	122
6.1	Disposal of the Brent Spar: arguments for and against land-based salvage	181
